L'OR ORIGINS · NATIONAL QR CAMPAIGN

Origin-mapped coffee, from shelf to screen

— STRATEGY & OBJECTIVE

Launch a premium, origin-mapped coffee line in Brazil ("Sul de Minas" and "Mogiana"). The goal: spark nationwide digital awareness that ultimately converts users into buyers at physical brick-and-mortar retail.

— THE OMNICHANNEL LOOP

Product packaging carried a prominent **QR code** across supermarket shelves nationwide — the primary offline-to-online bridge directly to this digital destination.

— UX & CRO INTERVENTIONS

- **Sensorial storytelling.** An immersive dark-mode environment built to mimic a luxury digital tasting — high-contrast type and rich profiles emphasizing aroma, body and acidity.
- **Strategic action paths.** "Experimente" CTAs routed users to retail locators and partner delivery apps rather than a DTC checkout — matching the awareness-first goal.

L'OR MIXES & CAPPUCCINO PREMIUM · PRODUCT LAUNCH

A motion-driven, indulgent flavor launch

— STRATEGY & OBJECTIVE

Introduce three new premium flavors — **Caramel, Chocolate and Vanilla** — under a gourmet, indulgent digital banner. The experience required an interactive, motion-driven approach to sustain scroll depth and maximize conversion signals.

— UX & CRO INTERVENTIONS

- **Texture-driven hierarchies.** Organic, marbled food-texture backdrops in warm, earthy tones to evoke taste and scent directly through the screen.
- **Interactive product education.** Content cards breaking down precise preparation methods and custom recipes to keep users scrolling and interacting.
- **Optimized conversion points.** Strategic CTA placement so that as engagement spiked, friction to sample or purchase was minimized.

MOBILE · SCROLL NARRATIVE

BRASIL EM GOTAS · PREMIUM FASHION E-COMMERCE

Killing the hidden-step PDP that stalled checkout

— THE PROBLEM

A funnel analysis revealed a critical leak: a bounce rate **exceeding 70%** directly on the Product Detail Page (PDP), stalling users right before they could initiate checkout.

— UX & CRO INTERVENTIONS

- **The sequential-journey trap.** The interface forced users to click a color swatch **before** size options appeared. This hidden state caused cognitive friction and erratic, drop-off behavior.
- **Qualitative verification.** Cross-referenced with Hotjar clickmaps & heatmaps. Even with explicit "1. Selecione a cor primeiro" instructions, users missed the dependency entirely.
- **A/B testing structure.** A 2-week VWO experiment, 50/50 traffic. Control kept the hidden sequence; the Variant exposed all color + size options simultaneously on load.

L'ORÉAL GROUP · DERMACLUB · CHECKOUT OPTIMIZATION

Rebuilding a broken checkout on VTEX

KEY METRICS · 2-WEEK A/B, 50/50

METRIC	GROWTH IMPACT
Revenue uplift	+7.10%
Conversion rate (CR)	+5.71%
Checkout click-through (CTR)	+32.00%

UX & CRO INTERVENTIONS

- **The funnel friction.** 70% of users reached the cart, but momentum broke at the gateway — an **80% bounce** inside checkout, driven by VTEX rendering bugs and endless scroll.
- **Data-backed redesign.** Heuristic audits + Hotjar attention maps exposed a fragmented hierarchy — users hunting for totals, coupon fields and loyalty points at once.
- **Reducing cognitive load.** A clean high-contrast light surface, progressive disclosure of loyalty milestones, and a unified styling matrix to group items within VTEX's container limits.

LET'S BUILD THE NEXT UPLIFT

Research-led design that moves the **numbers.**

APPROACH

Every decision cross-referenced with quantitative funnels and qualitative behavior — Hotjar, VWO, Google Analytics.

CRAFT

Premium, brand-faithful interfaces that reduce cognitive load exactly where the stakes are highest.

OUTCOME

Measured lifts in conversion, revenue and checkout progression across e-commerce and product launches.
